

STUDENT CASE STUDY EXECUTION REPORT

Department	FED
Subject	DSA-2
Academic Year	I-III Semester (2025-26)
Faculty Name	Ms. G. Mamatha
Student Name	PERUGU MANISHA
Roll Number	2520030054
Branch	CSE
Course Outcome	CO3 BFS, DFS, Prim's and Kruskal's Algorithms

Case Study Topic: Airline Route Network Optimization using BFS, DFS, Prim's and Kruskal's Algorithms

Work Done Summary

In this case study, we implemented **BFS, DFS, Prim's Algorithm, and Kruskal's Algorithm** to analyze airline route networks.

BFS and DFS were used to traverse connected airports and explore flight routes. Prim's and Kruskal's algorithms were used to construct a **Minimum Spanning Tree (MST)** for minimizing airline route infrastructure costs while maintaining connectivity between airports.

The algorithms were compared based on traversal efficiency, network connectivity, and cost optimization. The study concluded that MST algorithms help airlines design cost-effective route networks while BFS and DFS assist in route exploration and connectivity analysis.

Implementation Details

BFS Traversal

1. Started traversal from a source airport.
2. Visited neighboring airports level by level.
3. Used a queue for processing.
4. Verified network connectivity.

DFS Traversal

1. Started traversal from a source airport.
2. Explored routes deeply before backtracking.
3. Used recursion/stack.
4. Identified connected airport clusters.

Prim's Algorithm

1. Constructed Minimum Spanning Tree.
2. Selected minimum-cost edges.
3. Connected all airports with minimum infrastructure cost.

Kruskal's Algorithm

1. Sorted routes by cost.
2. Added edges without forming cycles.
3. Generated an MST with minimum total cost.

Conclusion

The study demonstrated the use of graph traversal and MST algorithms in airline route planning. BFS and DFS efficiently explored airport connectivity, while Prim's and Kruskal's algorithms minimized route infrastructure costs. These algorithms are widely used in airline network design, airport connectivity planning, and transportation infrastructure optimization.
